LMC is an independent economic consultancy comprising two companies:

LMC INTERNATIONAL serves the global agribusiness sector and its downstream food, fuel and chemical industries. LMCI delivers industry and policy insights, as well as supply, demand, price and trade flow analysis.

LMC AUTOMOTIVE provides market intelligence to vehicle and component manufacturers as well as financial, logistical and government institutions.

LMC clients include BMW, PepsiCo, Ford, EU Commission, P&G, Volkswagen, Kraft, Tate & Lyle, United Nations, WWF, HSBC and BP.

Whilst many employees enjoy long, rewarding careers at LMC, former employees now hold prominent positions with the World Bank, IMF, Volvo, Mercedes-Benz, Bosch, Oxford University, the UK Treasury, Credit Suisse and Unilever.

LMC are a global company providing internationally renowned expertise...

- We have worked in over 85 countries worldwide
- We are based in seven global offices
- We have over 100 employees, with half of these in our Oxford headquarters
- We have 12 separate commodity teams
- We have an open, flexible and friendly working culture, where interaction between all employees is encouraged

Careers in Economic & Business Consultancy

Develop your analytical skills with LMC Doctoral Internships

Projects currently available from October 2016 include:

Modelling the global outlook for carbohydrate crops

This is a major LMC annual project. You will help develop LMC's extensive databases to produce a model forecasting supply, demand and prices for the world's major tradable commodities over the next decade. Clients are multi-national companies and international institutions.

Implications of coconut's emergence as a superfood

Demand for coconut products has exploded with its "superfood" status. New and traditional end-users are competing for raw materials and have pushed prices to record levels. Field work for this project will assess the strength of consumption and consider the likely supply and price responses in SE Asia.

In your LMC Doctoral Internship you will:

- Support our existing expertise by delivering supervised analysis while enhancing your own technical skills and knowledge base
- Carry out analysis and forecasting on issues such as supply, demand, trade flows and price
- Develop your data management and modelling expertise
- Improve office communication skills and the ability to work both independently and as part of an experienced team
- Interact regularly with LMC directors, experts and industry contacts globally
